

Best Practices 2023-24

Best practice I

1) Title of the Practice

Maharashtra College Community Outreach Program: **WATER PROJECT** (Borewells, wells and watercooler/purifier)

2) Objectives of the Practice

- Increase access to clean water: By constructing borewells in strategic locations, we ensure that residents have reliable access to clean water for cooking and sanitation.
- Access water scarcity challenges: In areas experiencing water scarcity, our borewells serve as a vital source of water, alleviating the burden on existing resources.
- Promote hygiene practices and sanitation: Improved access to clean water plays a crucial role in promoting hygiene practices and preventing waterborne diseases.
- Empower communities: By providing a sustainable source of water, we empower communities to manage their water resources effectively and improve their overall quality of life.

3) The context

Maharashtra college constraints with space which makes it difficult to manage rainwater harvest. To overcome this constraint, the College decided to fulfil the approach of water harvest and initiated Bore well project which can make ground water available to people in areas which face water shortage. This will also help in water conservation by increasing the water table level as we know India receives good amount of rain fall every year. In places where the traditional supply of water is rare and insufficient, borewells are an essential way to access water. Our borewell projects represent a significant step towards ensuring water security for all residents and fostering a healthy and sustainable future. Maharashtra College along with two Non-profit organizations Jamiat Ul Anwar Charitable Trust and Jal Foundation initiated Borewell projects and successfully worked on many places.

4) The Practice

We are working with two Nonprofit organizations Jal Foundation and Jamiat Ul Anwar Charitable Trust in Borewell project. These organizations reach out the places which are facing water challenges and decide to relief the challenge by drilling borewell with installation of borewell pumps.

They contact our college for support. The college principal decides what help and support can be given and along with these organization the college raise funds and support in successful drilling and installation of borewell pumps.

5) Evidence of success

Maharashtra College Community Outreach Program: Water Project started in April 2023 has successfully completed 40 projects consisting of Bore wells, Wells and Water Coolers and Purifiers. These projects have been funded by the Stakeholders of Maharashtra College. The projects are spanned in Kokan, Hingoli, Pandarpur, Parbhani, Akhola, Sholapur and Jalna Districts of Maharashtra. Villages have benefited by the borewells, and wells and schools have benefited by water coolers.

Oct, 21 2023 Page No, 2

<https://epaper.prahaar.in>

6) Problems Encountered and Resources Required

Maharashtra College Community Outreach Programs Water Project started in April 2023 has successfully completed 35+ projects consisting of Bore wells, Wells and Water Coolers and Purifiers.

So far, no such problems have been encountered in our objective. It's been a successful journey.

7) Notes

One of the best practices, making basic and essential need of living “water” available to places facing water shortage. Initiatives like this resolve issues faced by rural people and help in better living.

Best practice II

4) Title of the Practice

Financial assistance to students during admission

5) Objectives of the Practice

To financially assist students by paying a major part of their fees in the form of donation (Zakat) or interest free loan so that they can access education.

To channelize donations and Zakat from the college staff, alumni and society.

6) The context

Most of the students seeking admission come from families having a very humble background. It is challenging for them to pay the full amount of fees in one installment, and some are too poor to pay anything. College tries to find solutions keeping their dignity to help them so that they can complete education and fulfill their dreams.

4) The Practice

Students seeking financial aid are identified by the principal and sent to the committee for solution. Most of them need a loan which they return after a certain time. Many students ask for the admission fees payment in installments and a few who cannot pay anything due to their low income seek help for donation for the payment of fees.

College help above students in paying fees from funds collected from donations/Zakat or loan from the college staff, alumni and the society.

After talking to parents of needy students and understanding their financial condition they are helped in fees payment from above raised funds either by making their payments in instalments or giving them interest free loans or through donations/Zakat.

5) Evidence of success:

This financial assistance started from the year 2021. To date a total of thirty students (opting for aided or unaided courses) have benefitted so far of which more than 15 students opted for the loan facility. More than Rs. 230000/- have been distributed to these students, ensuring their admission to our college. Out of the above-mentioned amount, more than 80000/- was disbursed as the loan amount. In the academic year 2023-24, a total of 6 students availed this financial assistance.

6) Problems Encountered and Resources Required

- The number of loan applicants is comparatively more to the amount of funds collected.
- Difficulty in understanding each case and identifying the deserving candidates.
- Maintenance of data, timely updating and timely collection of loan amount.

7) Notes

Complete confidentiality is maintained regarding the students who have received financial assistance at the time of admission thereby maintaining their dignity.
